Code maze

This was the first challenge I opened in this ctf and it had a python file named obfuscated.py and the description also said heavily obfuscated all this stayed only for a while

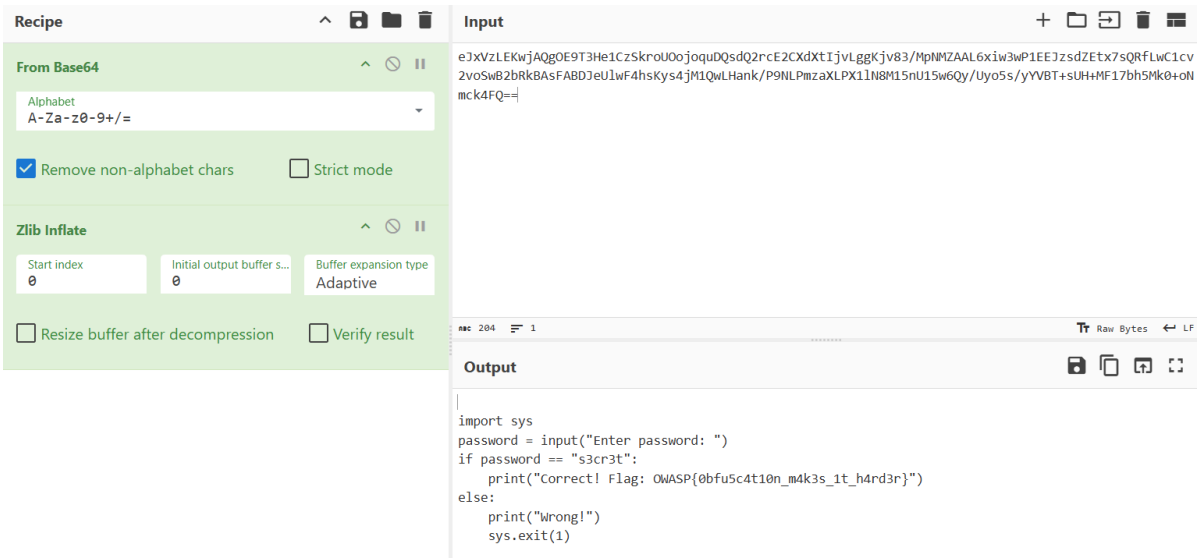

The content:

import base64, zlib

data = b"eJxVzLEKwjAQgOE9T3He1CzSkroUOojoquDQsdQ2rcE2CXdXtIjvLggKjv83/MpNMZAAL6xiw3wP1EEJzsdZEtx7sQRfLwC1cv2voSwB2bRkBAsFABDJeUlwF4hsKys4jM1QwLHank/P9NLPmzaXLPX1lN8M15nU15w6Qy/Uyo5s/yYVBT+sUH+MF17bh5Mk0+oNmck4FQ=="

exec(zlib.decompress(base64.b64decode(data)))

which literally had the flag in it but encryption I just took the data from it and pasted in cyberchef and got the flag , a easy start

Flag retrived : OWASP{0bfu5c4t10n_m4k3s_1t_h4rd3r}

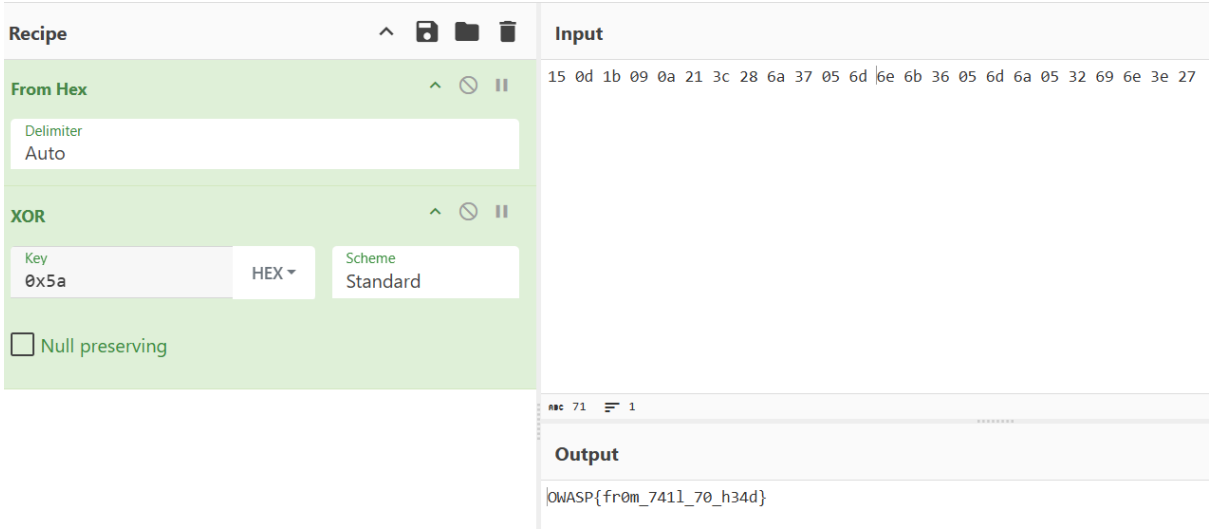

Rev

This one just had “reverse engineering” in the description which was like “huh” but then I got that it literally said “reverse” “engineering” where the string where reversed actually the task was to reorder the ELF header and then to restore the binary , so after the fix it revelled the XOR

15 0d 1b 09 0a 21 3c 28 6a 37 05 6d

6e 6b 36 05 6d 6a 05 32 69 6e 3e 27, with the key 0x5a

Now comes the cyberchef again in the game took the values with key to it , and decrypted and got the flag

Flag retrived : OWASP{fr0m_741l_70_h34d}
