What!?

The osint which made us search almost 20 commit id and try one by one , the first half and last part was easy to find but the middle one the commit id litraly took us almost 40 mins and this challenge

The incident report. Hacktron AI's "Hacking OpenAI" describes a chain involving a heap-buffer overflow in libheif and an OpenAI SSO misconfiguration.

The full commit hash. Follow the report's reference titled "libheif: simplify overlay overlap area computation" to the upstream GitHub commit page. The page shows the full commit hash: 85e21ad44eba931314337300a2376b8d28f085ae

The platform. The Discourse security advisory names Discourse as the affected software and describes remote code execution through malformed HEIF uploads.

Flag : OWASP{libheif_85e21ad44eba931314337300a2376b8d28f085ae_discourse}
