Cipher Master

This one had everything that is required to decrypt the flag, and we just need to follow the step craft the recipe in cyberchef and get the flag

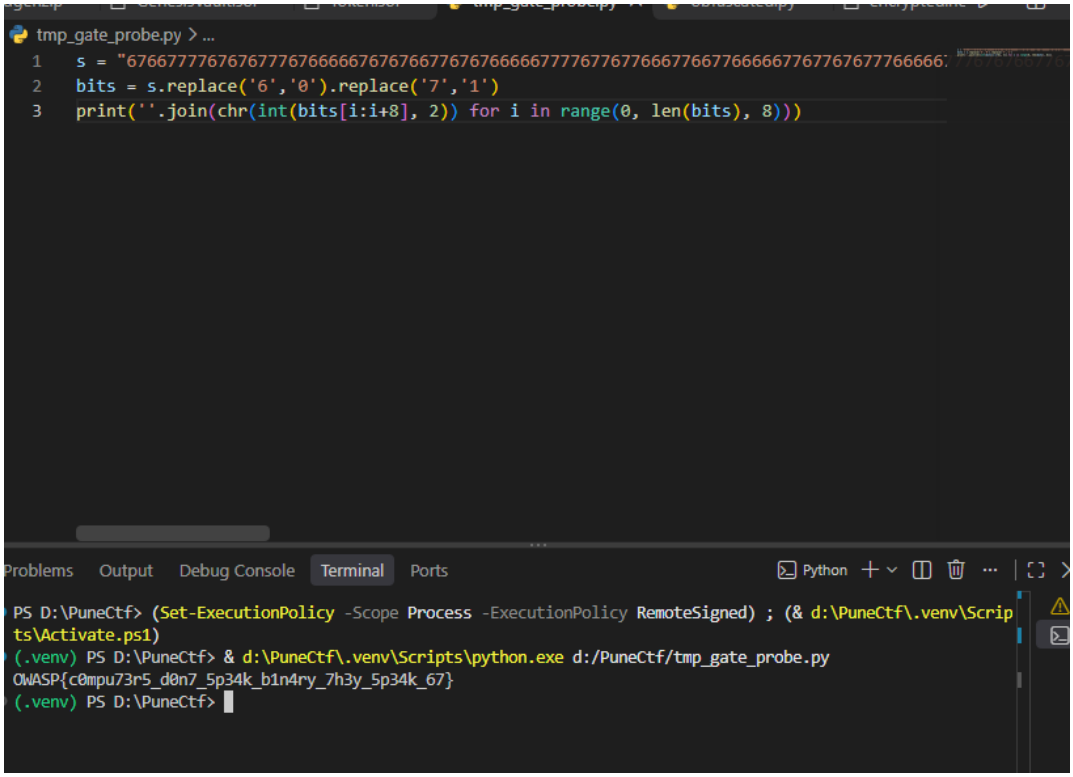

Flag: OWASP{mu1t1pl3_3nc0d1ng_l4y3rs}

67

The file consisted of lots of 6s and 7s and whenever there is a file that contains only two alphabets or symbols usually mean that it is either Binary or Morse code. The length is too big for morse therefore it must be binary.

Now that we know that its binary, we have to split it to make it make sense. The length of the text was 384 and it is perfectly divisible by 8 so we can understand that it is 8-bit.

So I took some reference from the internet and crafted a payload that replaces all the 6s and 7s with 0s and 1s and gave the text as input and that revealed the flag.

FLAG : OWASP{c0mpu73r5_d0n7_5p34k_b1n4ry_7h3y_5p34k_67}
